BRINGING MUSIC AND MOVIES TO LIFE

solo 2.1

Arcam present the Solo Movie 2.1, the perfect solution for music lovers who seek an involving movie experience. Using a pure stereo approach the Solo Movie 2.1 utilizes either a simple pair of full-range speakers or a smaller

pair of 'satellite' speakers and companion subwoofer. No artificial processing is employed thus eliminating the de-focused and confusing image typical of 'pseudo surround' systems.

muso

The Muso speaker offers a level of detail and bass drive far beyond that of a typical 'satellite' speaker. It is equally at home with music or movies making it the ideal partner for Solo systems, with or without the matching Logo subwoofer.

As an all-in-one 2.1 solution, this Solo is mightily impressive...the Arcam is a thoroughly likeable device – What HiFi Feb 08

logo

The Logo subwoofer, designed to easily integrate with the Muso speaker, uses a 10" driver and 200w amplifier in a discrete but stylish cabinet. Unlike many subwoofers the Logo excels in musical reproduction of bass frequencies with unique control and finesse.

mini

Arcam's Solo systems have redefined what's possible from all-in-one HiFi systems. The Solo mini provides the perfect answer for those who crave high quality reproduction but reject the traditional 'pile of boxes' HiFi system. Solo mini delivers delightfully engaging sound from a single stylish, compact and easy to use unit.

An ideal partner with the Muso speakers, the Solo Mini system features a CD player, radio tuner (DAB/FM/AM or FM/AM) and iPod interface using the Arcam rDock or rLead. In addition a front panel USB input allows music on USB memory devices to be played.

Connecting other devices to Solo Mini is simplicity itself. Plenty of inputs are available for external sources such as set top boxes, game stations or recording devices.

solo mini

Using sophisticated circuitry taken from higher priced Arcam components, the sound quality available from Solo systems is without equal at the price. Toroid based power supplies, high performance DACs and low jitter clocks deliver truly engaging sound with breathtaking clarity.

Specialist technologies used within Solo systems deliver music and picture quality rarely seen in domestic systems. Connectivity of Solo products is unparalleled for all-in-one systems offering plenty of inputs and outputs for modern systems.

To experience any of the Solo systems for yourself simply contact your local Arcam dealer for a demonstration.
